

**Ghostpress**  
Bulletproof anti-keylogger

# Features

Ghostpress is a free anti-keylogging software that prevent malicious software from capturing your keyboard presses.

## Global protection

Full system wide protection and not limited to specific programs.

## Process protection

Ghostpress prevents being closed from non-administrators.

## Delay protection

This optional feature allows spoofing your typing style in order to overcome supervision.

## Portable program

Our program does not require an installation and administrator privileges are optional.

## Low-level layer

Ghostpress protects your key presses from inside of your system.

# Delay protection

Example delay for pressing the same button

1

## What is delay protection?

This feature literally delays the key events for a specific time in order to prevent supervision by the way you type.

2

## When do I need delay protection?

This optional feature is made for people who want to ensure that the typing behavior is not the same in order to get identified. Otherwise we do not recommend to enable this feature.

3

## What is random input delay?

This setting delays each key event for a specific random time. There will never be a same pattern or a same delay between two key events unless it is randomized that way.

4

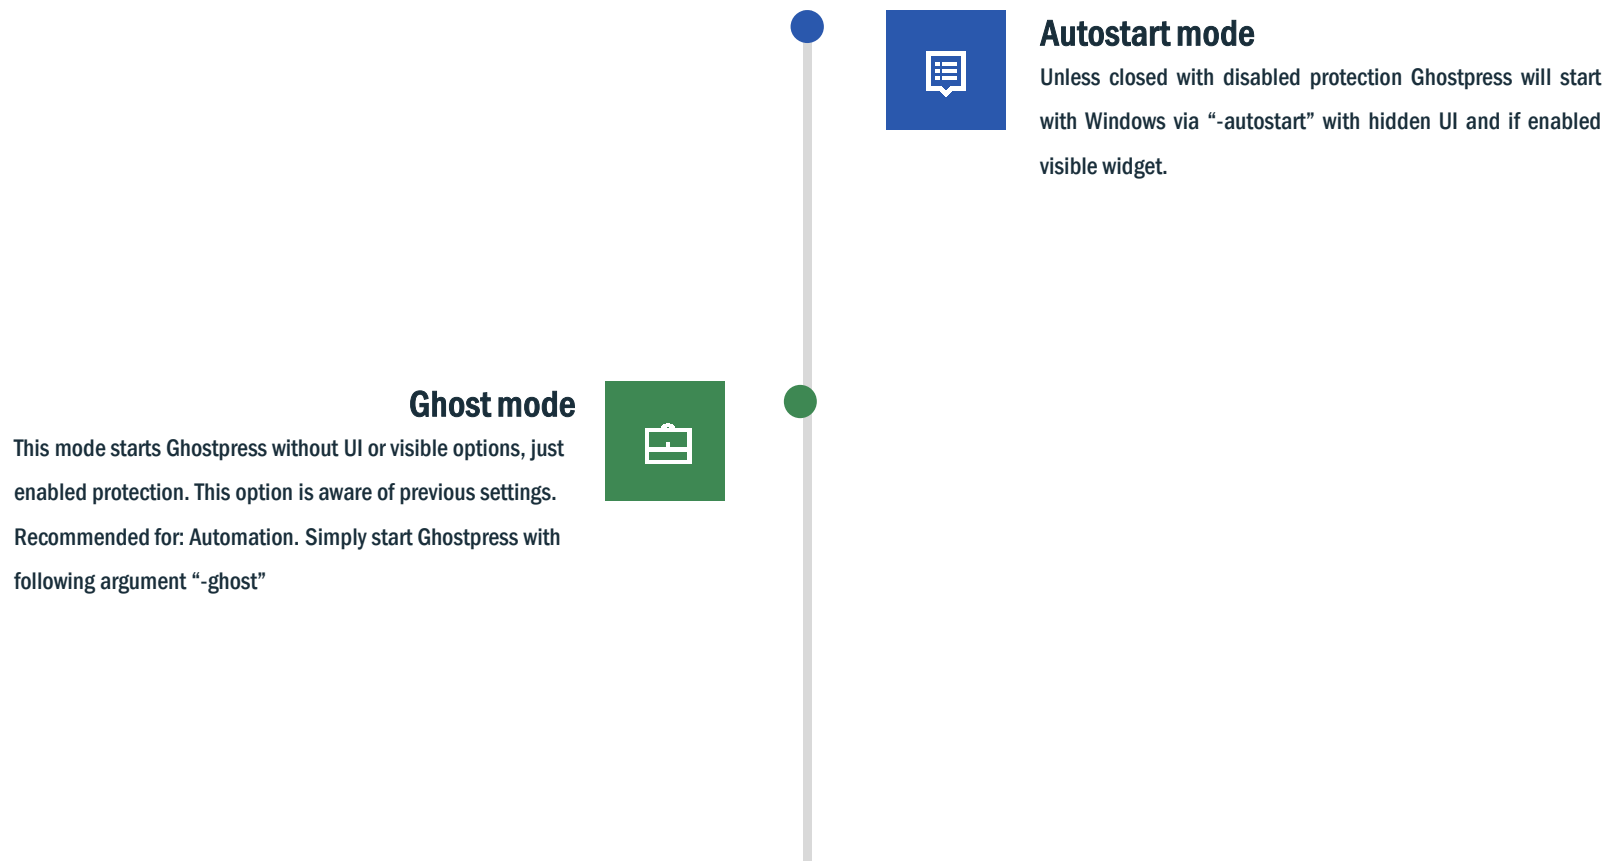

## What is random input behavior?

This setting uses two random parameters. First of all a smaller random value like "random input delay" and another generated value for the current key. The generated value is safely generated by a cryptographic number generator and stored until Ghostpress restarts. This spoofs a specific typing behavior temporary.

# Command line

For an individual use of Ghostpress you can use optional start parameters.

# Hidden features

You can edit Ghostpress.ini and enable optional features which may not be fully tested. Do not change any undocumented variables!

1

## Protect more keys

ForceProtection\_Tab=1

ForceProtection\_Enter=1

2

## Disable keys

ForceBlock\_Print=1

3

## Delay unprotected keys as well

ForceDelay\_All\_Keys=1

# Supported keyboard layouts

## Extended support for following keyboards

Dutch  
English  
French (Only Canada and Switzerland)  
German  
Italian  
Polish  
Portuguese  
Spanish (Except for Traditional Spain)

## Basic support

French (Belgium, France, Luxembourg, Monaco)  
Spanish (Spain (Traditional))

### Extended support

Protected keys:

a-Z

0-9 + shifted versions

Space, OEM keys(Minus, Plus, Period, Comma)

### Basic support

Protected keys:

a-Z

0-9

Space, OEM keys(Minus, Plus, Period, Comma)

### Basic support (Not supported)

Protected keys:

a-Z

Space, OEM keys(Minus, Plus, Period, Comma)

# Privacy policy

## Maximum protection

This application never connects to the internet nor does it send any data.

# About us

Thanks to Shawn Michael Wiebe and Icons8.com

## Mission

Regardless our software  
quality we believe  
spreading free software all  
over the world is our duty

## Vision

Prevention instead of  
indulgence

At our place placed in Germany we create award-winning software to make your computer more secure and to protect your privacy. Whether you are erasing sensitive files on your system with OW Shredder, hosting your files and sites with SecureGhost, protecting your computer from key-loggers with Ghostpress, or simply looking for relevant algorithms; we will most likely have a program for you.

**Thank you**

for choosing Ghostpress

**Stay safe!**
